URBAN FORK

URBAN FORK

Urban Fork is a casual dining restaurant offering a mix of international cuisines, with a focus on quick service and diverse menu options.

Problem statements

1
- Which menu items are the top revenue drivers?
- How do different categories contribute to overall revenue?

2
- What are the customer ordering patterns (e.g., items per order)?
- Which item combinations are frequently ordered together?
- How can the restaurant increase revenue and optimize its menu offering

Revenue & Performance

1. The restaurant shows multi-item purchasing behavior, with an average of approximately **2 items per order**, indicating potential for **bundled offerings.**
2. **Hamburger and Edmame most frequently ordered pair**

Result Grid | Filter Rows: | Export: | Wrap Cel

item_1	item_2	frequency
Hamburger	Edamame	90
Cheeseburger	Edamame	88
Hamburger	Cheeseburger	85
Korean Beef Bowl	Edamame	79
French Fries	Korean Beef Bowl	78
Cheeseburger	Steak Torta	77
Cheeseburger	French Fries	74
Tofu Pad Thai	Chicken Burrito	74
Hamburger	Korean Beef Bowl	74

Result 24

Revenue & Performance

- **Category wise** Italian cuisine contributes higher in terms of total percentage of sales, indicating revenue is concentrated in a few key categories, indicating clear customer preferences toward specific cuisines.

116

Result Grid | Filter Rows: | Exp

category	percentage_contribution
Italian	31.07
Asian	29.34
Mexican	21.85
American	17.74
Other	0

Revenue & Performance

Item Wise American Cheeseburger contributes higher in total sales. Each category is driven by small number of high performing items, suggesting revenue concentration within select products

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

category	top_item	Total_sales
American	Cheeseburger	8132.849999999926
Asian	Korean Beef Bowl	10554.600000000037
Italian	Spaghetti & Meatballs	8436.49999999995
Mexican	Steak Torta	6821.549999999943
Other	Unknown	0

Recommendations

1. Introduce **combo deals** or discounts on multiple item purchases to **increase average order value.**
2. Promote **Korean Beef Bowl and Hamburger** flagship product and consider bundling it with complementary items to maximize revenue.
3. Low-performing items should be evaluated for pricing, visibility, and customer preference before making pricing adjustments.
4. Focus on expanding high-performing categories.
5. Highlight best seller items from different cuisines and use them for targeted promotions.

Customer behavior

1. Average number of items per order is 2(approx), and certain number of items are frequently ordered together such as Hamburger and Edamame (120 orders) indicating strong pairing behaviour.
2. Additionally, Edamame appears across multiple high-frequency combinations suggesting its role as a preferred complementary item.
3. While Korean Beef Bowl is the top-selling item it does not appear prominently in frequent combinations.
4. Customer behavior analysis shows that customers are more inclined towards bundeled purchases.

Operations Analysis

Order patterns vary across hours and days
Peak hours: 11-01pm and 04-06pm
Peak days: Sunday, Monday(Peak), Friday, Saturday

Recommendations: Staff optimization
Optimize staff allocation and kitchen operations during peak hours to improve efficiency and service quality.

Best Seller Items

Hamburger

Result Grid | Filter Rows:

item_name	total_orders
Hamburger	622
Edamame	620
Korean Beef Bowl	588
Cheeseburger	583
French Fries	571

Lowest performing items

Chicken Tacos

Result Grid | Filter Rows: | Exp

item_name	total_orders
Chicken Tacos	123
Unknown	137
Potstickers	205
Cheese Lasagna	207
Steak Tacos	214

Key Recommendations

- Introduce combo meals for frequently paired items
- Promote top-selling items as flagship offerings
- Bundle high-demand mains with complementary sides
- Optimize low-performing categories
- Improve staffing based on peak hour trends
